The 29th Annual Conference was specifically designed to broaden perspectives and increase competence of those working in the area of breastfeeding and maternal-infant health. Physicians, nurses, nurse practitioners, midwives, dietitians, and others involved in perinatal care can expect positive influence with productive communication and collaboration. A review of the research and clinical implications will be discussed.

8:00-8:15 Welcome

8:00-8:50 Registration & Continental Breakfast

9:00-10:00 The 29th Annual Conference was specifically designed to broaden perspectives and increase competence of those working in the area of breastfeeding and maternal-infant health. Physicians, nurses, nurse practitioners, midwives, dietitians, and others involved in perinatal care can expect positive influence with productive communication and collaboration. A review of the research and clinical implications will be discussed.

9:35-10:00 Break

10:00-11:00 Latching on to a Better Understanding of Tongue and Lip Ties

Objective: Describe the mechanics and symptoms of structural latch restriction and how to address it anatomically.

11:45-12:45 Buffet lunch (included)

12:00-1:00 Buffet lunch (included)

1:00-2:00 Break

2:00-2:15 Break

2:15-3:05 Managing Neonatal Hypoglycemia – Can formula supplementation be avoided?

Abstract: Neonatal hypoglycemia is a common diagnosis that is frequently resolved with formula supplementation. In an exclusively breastfeeding infant, the blood glucose level at the end of the first week of life is a strong predictor of whether the infant will develop hypoglycemia. While no data exists to suggest risk, a thicker milk composition is associated with higher blood glucose levels. Among clinical indications, hypoglycemia only occurs in approximately 2% of breastfed infants. The lack of evidence to support formula supplementation and the volume of milk needed to provide equivalent nutrition make exclusive breastfeeding a difficult task. Neofeeding strategies, such as expressed breast milk (EBM) supplementation, can restore the natural hypothalamic-pituitary-adrenal (HPA) axis, thereby reducing stress cycles and promoting positive nutrition outcomes.

2:15-3:05 Managing Neonatal Hypoglycemia – Can formula supplementation be avoided?

3:05-3:55 Communication Strategies that Work: Can you hear me? Can I hear you?

Objective: Describe the mechanics and symptoms of structural latch restriction and how to address it anatomically.

3:05-3:55 Communication Strategies that Work: Can you hear me? Can I hear you?

4:00-5:00 Latching on to a Better Understanding of Tongue and Lip Ties

Abstract: Latching on to a Better Understanding of Tongue and Lip Ties

5:00-6:00 Buffet lunch (included)

6:00-7:00 Reflection Dinner & Celebration of Success

7:00-8:00 Registration & Continental Breakfast

8:00-8:15 Welcome

8:00-9:00 Breastfeeding and Sleep of Infants

Objective: Minimize the emotional and behavioral issues surrounding sleep training. Discuss different approaches to sleep training and the benefits of co-sleeping in the shared family. The role of sleep in the developing brain will be presented. The need to develop a holistic approach to sleep will be discussed.

9:00-10:00 Communication Strategies that Work: Can you hear me? Can I hear you?

Objective: Identify the most common surgical issues seen in the peripartum period. Develop the most effective surgical intervention.

9:35-10:00 Break

10:00-11:00 Breastfeeding and Sleep of Infants

Objective: Minimize the emotional and behavioral issues surrounding sleep training. Discuss different approaches to sleep training and the benefits of co-sleeping in the shared family.
